DETAILED ACTION

Advisory Action

1. The advisory action sent to Applicant on August 11, 2005 is hereby withdrawn because the interview conducted via telephone with Applicant and Applicant's agent appear to overcome the rejections and the summary of the interview is herein attached.

Allowable Subject Matter

2. Claims 1, 3, 5-8, 10-13, 18, 20-22, 28-30 and 34-44 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is U.S. Patent No. 6,047,327 to Tso et al.

Applicant discloses a method of configuring a wireless communication device comprising the steps of : establishing a target list of resources to be supported by the wireless communication device based upon a user profile; retrieving a set of components associated with each established internal business resource to form a menu of components; forming a presentation comprising component data associated with respective components; the component data comprising template data and reference data the template data comprising system architecture data and system integration data from previous configuration of the architecture for the wireless communication device the reference data including a marketing tutorial and a financial data tutorial; determining an arrangement of the component data and the components

Art Unit: 3621

from the menu to form the preferential configuration, the arrangement including a menu of components denoting whether the component is required for supporting an internal business resource; forming the preferential configuration based upon the internal business resources to which the user has been provided access; and Limiting the capability of the user to write and delete data associated with one or more of the internal business resources based upon the user profile.

The closest prior art Tso et al (U.S. Patent No. 6,047,327) provides a communication system having a first server and a first client connected to the first server through a network, wherein the first server selectively sends a set of infobites to the first client based on a filter. Tso et al information distribution concept and method included the steps of deriving a set of infobites, filtering the set of infobites based on the filter into a filtered set of infobites and transmitting the filtered set of infobites to the first client. Tso et al failed to teach a method comprising establishing a list of internal business resources; forming a presentation comprising component data associated with respective components; the component data comprising template data and reference data the template data comprising system architecture data and system integration data from previous configuration of the architecture for the wireless communication device, the reference data including a marketing tutorial and a financial data tutorial. Tso et al further failed to disclose determining an arrangement of the component data and the components from the menu to form the preferential configuration, the arrangement including a menu of components denoting whether the component is required for supporting an internal business resource; forming the preferential configuration based

Art Unit: 3621

upon the internal business resources to which the user has been provided access; and Limiting the capability of the user to write and delete data associated with one or more of the internal business resources based upon the user profile. Thus Applicant's inventive concept is novel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior arts made of record and not relied upon is considered pertinent to applicants disclosure.

Tijerino discloses an adaptive communication data retrieval system.

Tamura et al discloses a system and methods for providing on-demand responses to inquiries made by information consumers.

Fascenda discloses a system, method and apparatus for automatically and dynamically updating options, features and/or services available to a client device.

Dasan discloses a personalized information retrieval using user-defined profile
